

Delivering the Promise of Data to Private Equity

DataDiligence is a specialist consultancy providing **data due diligence**, plus **data strategy & implementation** into private equity and M&A.

Working with fund managers and portfolio companies, we provide data validation, valuation & value creation across the investment cycle, resulting in:

- better investment decision making
- true insight & trends analysis
- identification of break-out opportunities
- improved returns

We approach 'monetising' data by asking: *How effective is the organisation at leveraging data and analytics to power its business and operational models?*

Because, data's true value lies in how it is deliberately used, analysed and applied to solve business problems, enable the strategy and optimise outcomes. Or said another way: **the value of data isn't an accounting exercise; it's an economics exercise.**

Data is a multiplier opportunity.

What our clients say

“

...treats data as a strategically valuable asset (rather than a cost centre) and demonstrates data's significant impact on business performance...a trusted partner when it comes to unlocking the value of our data and business.
